SAPHIR travellers

The most successful traveller finish over the last decades

SAPHIR – the most copied, universal and reliable traveller finish which became a world standard

SAPHIR travellers have been exposed to a special diffusion process. The enrichment components are present on the surface as well as throughout the entire traveller body. This guarantees unchanging top running conditions over the entire traveller lifespan.

Description

- diffusion treatment of surface and body
- the SAPHIR process leads to excellent steel homogeneity
- attractive price/performance ratio

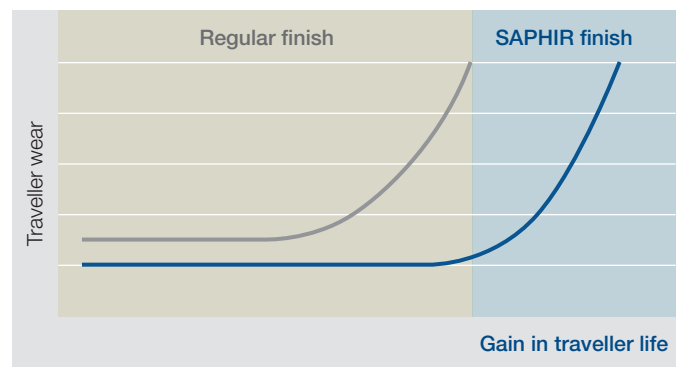

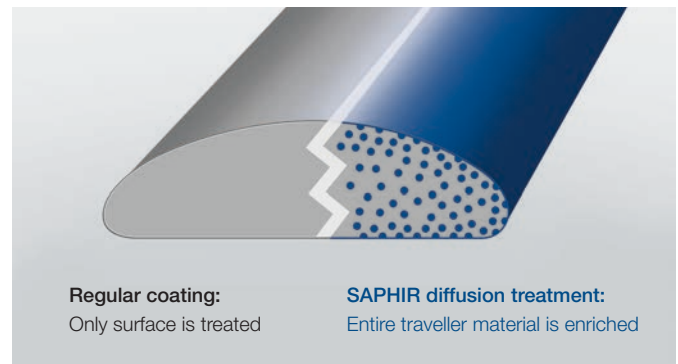

Advantage

- excellent gliding properties
- smooth surface results in low yarn friction
- the characteristics of the SAPHIR treatment remain constant, even with an affected traveller surface

Application

- for high spindle and traveller speeds
- for all fibre types and yarn counts
- for regular operation as well as running-in

SAPHIR, the successful traveller finish – over 20 billions sold

The original SAPHIR traveller with excellent gliding properties
